

## DeepaMehta Project

The digital power is not yet harnessed

"Computers rarely improve the efficiency of the information work they are designed for because they are too hard to use and do too little that is sufficiently useful. Their many features, designed to make them more marketable, merely increase cost and complexity."

"Modularized software and networked computing will require a re-engineering of the entire economy and of a substantial part of our culture."

"A well-designed computer system can actually improve the quality of your thinking"

David Canfield Smith
